## Enhancements

### Single Sign On (SSO)

Version 2019.2 now supports the option of single sign. Single sign on is enabled via the system configuration page within Heureka and we recommend contacting your Heureka representative before enabling.

### SCIM Support

Heureka now support SCIM (System for Cross-domain Identity Management). SCIM is designed to make user identities in cloud-based applications and services easier.

Heureka allows five user operations within SCIM. They are:

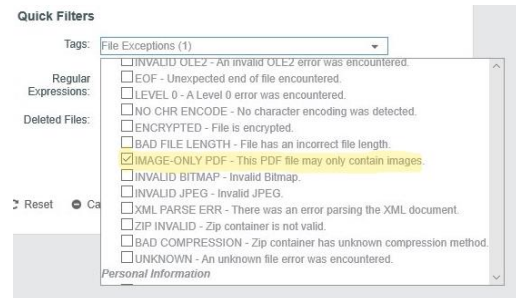

- Create Account
- Read list of accounts
- Read account details
- Update account details
- Deactivate Account

SCIM is enabled from the system configuration page within Heureka. A bearer token is generated by the system automatically which will be used in the SCIM management tool.

### Image-Only PDF detection

Heureka now automatically identifies image-only PDF files. These files are tagged at the endpoint level and can be specifically searched for using the **Quick Filters > Tags > Image Only PDF** check in the **File Exceptions** area of your search criteria set-up page.

## Bug Fixes & Improvements

- Improved - Indexing speed improvements (up to 30% faster)
- Fixed - license issue whereby endpoints may show as “grayed out” in the Endpoints grid
- Fixed – Issue where indexer stalled attempting to decompress RAR files thus slowing down the process.
- Improved – Endpoints grid now displays total Heureka indexed size amount

Heureka Software is a technical leader in endpoint search, identify and classification software. Our goal is to bring order to unstructured data by identifying risk while helping you realize the value of unstructured data across all endpoints.
